

Series

566

Type: solvent

Printing process: pad printing

Ink type: one and two-component

Finish: glossy

Materials: ABS, Lacquered surfaces, plasticized PVC, Polycarbonate, Polymethacrylate (PMMA), Polystyrene, rigid PVC, SAN, treated Polyester, Wood

Main features:

- . Glossy
- . Moderate coverage
- . Good flexibility
- . Quick drying
- . Good light fastness
- . Excellent solidity for external applications
- . Soluble during printing

Thermoplastic substances are sensitive to tension cracks, especially PS and PC, due to the solvents present inside the ink. Pre-tests are absolutely essential for such printing applications.

566 series mixed with hardener has a pot life of approx. 8h (at 20°C).

Higher temperatures and humidity will reduce pot life

(suggested temperature at 20-25°C and low moisture content in the workplace).

Used as a two-component ink, 566 series has to be mixed with hardener at a specified ratio prior to processing.

Thinner is added after addition of hardener.

Leave the mixed ink pre-reacting for approx. 15 minutes prior to print.

Certifications: CLP/GHS (EC 1272/2008), Conflict minerals free, EN 71-3, Reach (EC 1907/2006), RoHS

The EN 71:3 Directive is valid for standard shades of one component inks, two component inks, Ink system and Process colors, HD shades and for all not standard shades which do not contain metallic shades, metallic pastes or fluorescent pigments or inks.

In order to clarify any doubt on not standard shades, it is always recommended to provide us a specific request.

Eco-sustainability (free of): Animal origin ingredients, Aromatic Hydrocarbons, Azo dyes, Bisphenol A (BPA), Formaldehyde, G-B Ester, Latex, Melamine, PAH, Persistent organic pollutants, Phthalates (listed in RoHS directive)

Note: shades in the fluorescent color chart contain formaldehyde.

Note: inks are formulated without aromatics naphthas, potential IPA contaminations are minimal.

Outdoor resistance (years): 2

The ink is recommended for outdoor exposure.

The pigments' solidity rate is between 6 and 8 DIN on the WOOL scale.

In case of mixing with the transparent bases 70 TR or TP, or with the white 160 or 60 BN, the light fastness and atmospheric agents decrease.

If you want to increase the outdoor solidity, it's recommended to add 5-7% of UV adsorber to the ink.

Drying process: 10 minutes at room temperature

566 series dries physically by evaporation of solvents or through chemical reaction.

Drying times depend on various factors:

Series

566

- . thickness of printed ink layer (single print, multi-layer print).
- . type and amount of thinners/retarders used.
- . type of oven
- . drying temperature
- . type of substrate on which the ink is deposited.

Ink dries physically by evaporation of solvents:

- . 15-20 minutes at room temperature (depending on local conditions)
 - . 45 sec at 50°C in an air circulation oven.
- (The test performed in our laboratory was carried out under the following conditions: 8 mt / min, clichet at 36 microns, medium thinner 1000 DM at 15%, air circulation oven).

Two-component drying by polymerization:

When the Series 566 is used with the relative hardener, at the beginning the ink dries physically, followed by the polymerization reaction which takes place at room temperature (20°C) in at least 5-7 days.
 If the printed film is heated in an oven at 80°C for about 10 minutes, the polymerization is completed within 24 hours.

Mechanical and chemical solidity:

Alcohol	
Detergents	as two-components
Flexibility (Elasticity or Bending)	good
Greases	as two-components
Oils	as two-components
Sunlight-proof	as two-components
Surface hardness (Abrasion)	
Weather-proof	as two-components

Suitable for outdoor applications.

The tests must be carried out 5-6 days after complete polymerization.

Colours range: EXTRA - M, INK SYSTEM

160	165	70 TR							

Please refer to the Glossy, Metallic and Ink System ink color charts.
 The Ink System are 12 colour shades for mixing of RAL, PMS and HKS colours.

The metallic shades are available only by mixing the relative pastes with the Transparent Base 566 70 TR.

Gold paste	75	10-20%
Gold paste	76	10-20%
Gold paste	77	10-20%
Bronze paste	78	10-20%
Silver paste	79-050	10-15%

The metallised pastes composed with the relative transparent base 566 70 TR, due to their particular composition, can oxidize.

The pot-life of the compounded METALLIC PASTES is about 8 working hours.

Ink System shades are:

Series

566

1080 yellow, 1081 magenta, 1082 blue, 1083 black, TP paste (CMYK), necessary for making four-color prints.

In the range are also included the following shades :

160 HD Opaque white

165 HD Opaque black

165 S Non magnetic black

Auxiliaries and additives:

1000 DM medium thinner	20%	
1000 DL slow thinner	20%	
1000 DR fast thinner	20%	
1000H-N Green hardener	5%	for outdoor applications. diisocyanate content < 0,1%
1000H hardener	10%	
1000H-N hardener	10%	for outdoor applications
Retarder paste	10%	max
M 2000/S levelling agent	1%	
Universal antifoam agent	0,4%	
Antisilicone/s	0,4%	
UV Adsorber	8%	
NPT matting powder	2%	6% max

Ink removal:

DACS solvent

Lavaggio telai solvent

Aprimaglia Spray

STORAGE:

Please keep the cans in a dark place, at temperature of 15-25°C.

If the recommended temperature is higher than the suggested one or the cans are not completely closed, the shelf life and the qualities are drastically reduced.

CLASSIFICATION:

Before using this ink, consult the relevant safety data sheets available.

The safety data sheets provided comply with the REACH regulation (EC 1907/2006).

The hazard classification and related labelling are compliant with the CLP / GHS regulation (EC 1272/2008).

OTHER INFORMATION:
